June 6, 1983

(b)(6)  
Greenacres, Washington 99016

Dear (b)(6)

As you know, your water well was selected as a sampling point for aquifer monitoring purposes dating back to the original "208" program study initiated in May of 1977. In this regard, you earlier were notified by the "208" program of their findings regarding the water quality of your well.

Recent findings (copy of EPA report attached) show increasing values of organic contaminants in your well water. On this subject, a meeting was held last Thursday, June 2, 1983, between William Mullen (EPA), Dan Sander (DSHS), and myself, at which time the analysis results were discussed and consensus was reached to again advise that you do not use the water from your well for drinking or cooking purposes. As alternative water supply sources, we have made arrangements for you to obtain water from (b)(6) your neighbor to the east, or (b)(6) caretaker at the racetrack at Holiday Hills, your neighbor to the south.

Further, as we discussed with you, we will do some additional water sampling in the area. If we can be of any further assistance to you or if you have any questions about this matter, please do not hesitate to call me.

Thank you for taking the time to meet with us and discuss this matter.

Sincerely,

ENVIRONMENTAL HEALTH DIVISION
